SQL SELECT, WHERE, DISTINCT practice

1. Write a select statement to return all columns and rows from the customer table.

```
Select *  
from customer;
```

2. Write a query to select first name, last name, and email from the customer table.

```
select first_name, last_name ,email  
from customer;
```

3. Write a query to return all rows and columns from the film table.

```
select *  
from film;
```

4. Write a query to return unique rows from the release_year column in the film table.

```
select distinct (release_year)  
from film;
```

5. Write a query to return unique rows from the rental_rate column in the film table.

```
select distinct ( rental_rate)  
from film;
```

6. A customer left us some feedback about our store. Write a query to find her email address – for Nancy Thomas.

```
select email  
from customer  
where first_name='Nancy'and last_name= 'Thomas';
```

7. We're trying to find a customer located at a certain address '259 Ipoh Drive' – can you find their phone number?

```
select phone , address  
from address  
where address = '259 Ipoh Drive' ;
```

8. Write a query from the customer table, where store id is 1 and address id is greater than 150.

```
select*  
from customer  
where store_id=1 and address_id >150;
```

9. Write a query from the payment table where the amount is either 4.99 or 1.99.

```
select *  
from payment  
where amount = 4.99 or amount=1.99;
```

10. Write a query to return a list of transitions from the payment table where the amount is greater than 5.

```
select *  
from payment  
where amount>5;
```
